STANDING FRAME

Contents:
- standing frame base
- front panel with table insert
- back panel with insert
- foot block
- 2x wooden lateral supports.
- A small black plastic bag with 10x50mm screws and 2x bolts with wing nuts.

- 1x knee pillow
- 2 back pillows (29x18cm)
- 1 small chest pillow (28x9cm)

1. Place the front panel behind the triangular blocks on the base. Fix it with 4 screws on each side and 1 through the triangular block on each side. Make sure both posts of the front panel are flat on the base and against the triangular blocks before drilling.
2. Slide the table insert into the front panel and fix the table with a bolt and nut in the position of required tilt.

3. Place the back panel on the base in the position suitable for the child’s body size. Use 2 bolts and wing nuts through the drilled holes to secure it.

4. The front and back panels MUST be parallel with each other and the 2 lateral supports MUST be parallel with the base. For example: If the back-panel is in the 2\textsuperscript{nd} hole from the back the bolt in the lateral support will be in the 2\textsuperscript{nd} hole from the front.

5. The small chest-cushion is placed in front, the 2 bigger ones at the back behind the buttocks and trunk, and the black one is for the knees.

6. Adjust the foot block so that the child’s heels are in correct alignment with the body.
If you are unable to assemble the Standing frame for any reason or if you are unable to deliver it to the child’s house, please do not hesitate to call Timion. We are happy to assist.
